Let's Start!

A Global Network!

Learning Outcome:

Describe common activities at work to a visitor using short sentences in familiar spoken and written situations.

Give detailed and important information regarding to the history of language programming in different periods of time.

Can Do Statements:

- I can explain why the internet age is important for software programming.
- I can describe key features related to the internet age.
- I can understand different concepts related to software programming and their relation to the internet age.

Ask your partner:

- Why is the Internet important around the world?
- What benefits does the Internet provide to software programming?

Let's Explore!

Internet is part of our lives!

Instructions: Read the text below.

Cesar: Hey, Jessica. What are you staring at?

Jessica: Nothing. I'm just thinking.

Cesar: You seem a little distracted, what are you concerned about?

Jessica: Well, I run out of data on my phone and I realized that most of the things I do during the day require me to be online.

Cesar: We are living in the internet age. We need the internet for many things nowadays, long time ago people didn't need it that much. In a near future, we won't know how to live without it.

Jessica: I know! The internet has made a big impact in our lives.

Cesar: Its growth started in the mid-1990s, and it contributed to the development of programming languages by opening new platforms. The internet age also brought streamlining access which allows people to access to vast amounts of information.

Jessica: What age are we in? Technology advances very fast. In the past, no one needed many technological devices as we need now.

Cesar: I will compare software programming to a library. After the internet age, software programming has become in one of the biggest trends in modern computing systems. Programmers need the internet not only as a source of general information but also as a big library of reusable codes.

Jessica: Interesting. However, software programmers are supposed to know how to develop software without an internet connection, don't they? I understand that they can search for anything online, but is the internet really necessary for everything?

Cesar: Nowadays, software programming evolves day by day thanks to the internet age. In the past, a programmer who wanted to work on a software had to invest a lot of time and effort. Today, software programmers are able to communicate with their colleagues so, everyone gains experience from collaborating with other people around the world.

Jessica: Wow! You are an expert on this topic.

Let's Practice!

Now, the Internet is more important than before.

Instruction: Read the sentences. Write the missing words in the blank.

Use: needed, evolves, long time. Use capital letters where necessary.

1. _____, people didn't need the Internet.
2. In the past, no one _____ many technological devices.
3. Nowadays, software programming _____ day by day thanks to the Internet age.

Let's Practice!

Did you pay attention to Cesar?

Instructions: Select the correct answer.

1. According to Cesar, What age are we in?
 - a. The Internet age
 - b. The machine age
 - c. Technology age
 - d. New age
2. When Cesar said "The Internet age", What did he talk about?
 - a. The Internet is going to be the next big thing.
 - b. This period of time is characterized by the use of the Internet.
 - c. The importance of wireless.
 - d. The impact of communication.
3. When Cesar said "The Internet age also brought streamlining access". What was he talking about?
 - a. The access to vast amounts of technological machines regardless of the money.
 - b. The access to vast amounts of money regardless of the economy.
 - c. The access to vast amounts of software platforms regardless of the technology.
 - d. The access to vast amounts of information regardless of the distance.
4. Cesar has compared the Internet to a library. What do you think about it?
 - a. He is right because the Internet is a source of information regarding almost any topic.
 - b. He is wrong because the Internet is not a physical source.
 - c. He is right because the Internet is a place where you can find information about some topics.
 - d. He is wrong because the Internet is just for people who want to learn programming languages.
5. According to Cesar, software programmers gain experience thanks to the Internet. Do you agree with this comment?
 - a. Yes, I do. Because software programmers are able to contribute with their colleagues around the world.
 - b. No, I don't. Because software programmers don't use the Internet.
 - c. Yes, I do. Because software programmers can download information no matter where it comes from.
 - d. No, I don't. Because software programmers work just with one platform.

Extension Activity

How important is the Internet in software programming?

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about the Internet age.
- Take notes about the relationship between the Internet age and software programming.
- Write a paragraph where you explain why the internet is important to develop a software.
- Use time expressions, simple present tense and simple past in your paragraph.
- Show your paragraph to your instructor.

Self-Assessment

- | | Yes | No |
|---|-----------------------|-----------------------|
| 1. I search information about the internet age. | ☐ | ☐ |
| 2. I explain the importance of the internet to develop a software. | ☐ | ☐ |
| 3. I write a text to develop my opinion. | ☐ | ☐ |
| 4. I use time expressions, simple present tense, and simple past in my paragraph. | ☐ | ☐ |

Target Words

- **gain** (verb): to obtain things out of something
e.g. Today, software programmers are able to communicate with their colleagues, so everyone gains experience from collaborating with other people around the world.
- **streamlining access** (noun): modern services that connect people from different areas
e.g. The Internet age also brought streamlining access which allows people to access to vast amounts of information.
- **online** (adjective): something connected on the internet
e.g. Well, I run out of data on my phone, and I realized that most of the things I do during the day require me to be online.
- **vast** (adjective): a big amount of something
e.g. The Internet age also brought streamlining access which allows people to access to vast amounts of information.
- **impact** (noun): the effect caused by something
e.g. Internet has made a big impact in our lives.

Learning Points

Simple Present Tense vs. Simple past Tense

You use the **simple present** tense along with the **simple past** tense to contrast events and actions in different periods of time

Sometimes we like to talk about how things are in the present and how different they were in the past. In order to express our ideas, it's important to review the basic rules of these two tenses.

Present Simple:

We use it to talk about routines and everyday actions. Remember that for the third person singular (He, She, It) you need to add "**-s, -es, -ies**" to the verbs in affirmative sentences.

Example:

Today, the Internet **gives** us a lot of tools to interact with others.

Past Simple:

We use it to talk about actions and events in the past. Remember that there are regular verbs (those that finish in -ed such as change - changed) and irregular verbs (those that change such as write-wrote).

Example:

Internet **had** a lot of restrictions.

Present Simple vs. Past Simple

If we combine these two tenses, we can create a comparison between the present and the past.

Example:

*Today, the internet **connects** millions of people around the world. In the past, only a few amount of people **had** access to it.*

Examples

- *We need the Internet for many things nowadays, long time ago people didn't need it that much.*
- *Nowadays, software programming evolves day by day thanks to the Internet age. In the past, a programmer who wanted to work on a software had to invest a lot of time and effort.*
- *Its growth started in the mid-1990s, and it contributed to the development of programming languages by opening new platforms.*
- *The Internet age also brought streamlining access which allows people to access to vast amounts of information.*

Learning Points

Questions with Prepositions, "at" - "about"

We can use **prepositions** at the end of questions in any tense to be specific about the kind of information that we want to get.

About: Whenever we use the preposition *about* in a question, we demand for information related to something's content.

Structure:

Wh question + auxiliary + subject + verb + **about**?

Example: *What does she talk about?*

At: When we use *at* in questions, we usually want to know about the location of something.

Structure:

Wh question + auxiliary + subject + verb + **at**?

Example:

What are you looking at?

Examples

- *What are you staring at?*
- *What are you concerned about?*

The importance of internet

The Internet has become a big part of our lives. Can you imagine how different things would be without the Internet?

The Internet has provided a lot of benefits to our world. It is capable of spreading all types of information across towns, cities, countries, and continents. The Internet has impacted education, healthcare, politics and every other field of science.

Learning Points

Let's mention some benefits of the Internet:

- People can access to different types of information.
- People can socialize easier, regardless of the distance.
- Science, culture, and entertainment are accessible to anyone.
- Students are able to find many resources for their assignments.

It's true that the internet may have some risks, sometimes the information you find there may not be correct, or there are people trying to use the Internet to harm others in various ways. The Internet is a wonderful thing, but everyone should be responsible when using it.

Examples

- *The internet age also brought streamlining access for people to have access to vast amounts of information regardless the distance.*
